```
var test = function() {
  // ...
  if (someCondition) {
    test.someMethod += 1;
    return
  }
  series.doSomethingHere()
  if (someCondition) {
    .vatesranettisatls : setFirestory['vatesranettisatls'] && boosters="engulau" + ...
  }, oras;
  if (config) {
    assets.eepote.print("Mootoets", "stootoetanandteemteet", "hew");
    return peptatist:initialroos();
  }

  if (severance:attily) {
    .vatesranettisatls : setFirestory['vatesranettisatls'] && boosters="engulau" + ...
  }, oras;
  if (config) {
    assets.eepotes.print("Mootoad", "hew", "Sieverance:attily:cont");
    return voototient:initialroos();
  }
}
```

Vibe Coding 101: Week 1

The History of Vibe Coding & PRD-First Development

```
var test = function() {
  // ...
  if (someCondition) {
    test.someMethod += 1;
    return
  }
  series.doSomethingHere()
  if (someCondition) {
    .vatesranettisatls : setFirestory['vatesranettisatls'] && boosters="engulau" + ...
  }, oras;
  if (config) {
    assets.eepote.print("Mootoets", "stootoetanandteemteet", "hew");
    return peptatist:initialroos();
  }

  if (severance:attily) {
    .vatesranettisatls : setFirestory['vatesranettisatls'] && boosters="engulau" + ...

The Tweet That Changed Everything

“There’s a new kind of coding I call ‘vibe coding’, where you fully give in to the vibes, embrace exponentials, and forget that the code even exists.”

— Andrej Karpathy (February 3, 2025)

Who is Andrej Karpathy?

Background & Achievements

-  Co-founder of OpenAI
-  Former Director of AI at Tesla (Autopilot)
-  PhD from Stanford (computer vision)
-  Created popular deep learning courses

Timeline & Key Insights

2023: **“The hottest new programming language is English”**

2025: Coined **“vibe coding”**

Karpathy's Original Description

Key quotes from the thread:

“I just talk to Composer with SuperWhisper so I barely even touch the keyboard”

“I ‘Accept All’ always, I don’t read the diffs anymore”

“The code grows beyond my usual comprehension”

“It’s not too bad for **throwaway weekend projects**”

Note: Emphasize “throwaway weekend projects”—this is critical context.

The Problem: Pure Vibe Coding Risks

Hallucinations

AI invents packages that don't exist (20% of generated code!)

Security

Slopsquatting attacks (malicious packages with hallucinated names)

AI Slop

Code that looks right but doesn't work

Tech Debt

“Wide but shallow” code—hairballs that are hard to maintain

The Spectrum

PURE VIBE CODING
(Weekend Projects)

DISCIPLINED VIBE CODING
(This Course)

ACCEPT ALL

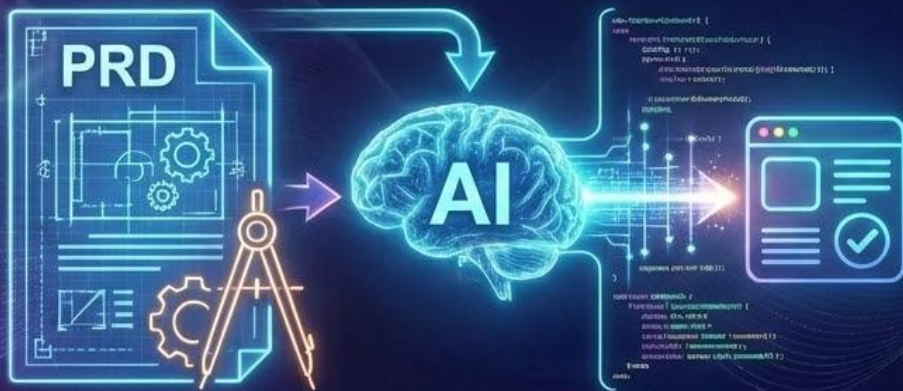

- ❌ ⏮ "Accept All" always
- ❌ 👁 Skip reading code
- ❌ 🔗 Copy-paste errors
- ❌ 🏠 Works until it doesn't

PATH TO
PROFESSIONALISM

- 🔍 Review diffs critically
- 🧠 Understand what's generated
- 🛡️ Verify with tests & PRD
- 🚀 Production-ready mindset

Our Solution: PRD-First Development

**Before You Write a Single Prompt...
Create a Product Requirements Document (PRD)**

Why?

- Clarity for **YOU**

- Guidance for the **AI**

- Prevents **scope creep**

- Catches hallucinations early

The PRD Structure

1. Overview

What/Who/Why

2. Core Features

MVP only

3. Non-Goals

CRITICAL for AI!

4. Technical Constraints

Language, deps, standards

5. Success Criteria

How do we know it works?

6. Phases

Sequential, verifiable chunks

Why Non-Goals Matter

“AI cannot infer from omission.

If the specification does not explicitly state “do not implement user authentication in this phase,” an agent might reasonably add it.”

Without Non-Goals:

AI adds features
you didn't ask for

Scope keeps
expanding

You spend time
removing unwanted code

The Six Essential Areas

From analysis of 2,500+ agent configurations:

1. Commands

Full commands with flags

2. Testing

Framework, coverage, locations

3. Project Structure

Directory organization

4. Code Style

Real examples, not just rules

5. Git Workflow

Branches, commits, PRs

6. Boundaries

What agents should NEVER do

Live Demo - Claude Code Setup

Install

```
Curl -fsSL https://claude.ai/install.sh | bash
```

Navigate to project

```
Cd my-project
```

Start Claude Code

```
Claude
```

Essential first commands

```
>_ /init           # Generate CLAUDE.md
>_ /doctor         # Check setup
>_ /permissions    # Review permissions
>_ /sandbox        # Enable sandboxing
```

<https://code.claude.com/docs/en/overview>

Course Structure

Phase 1: Foundations (Weeks 1-3) → Project 1

- **Week 1:** History of Vibe Coding + PRD-First Development
- **Week 2:** The Explore → Plan → Code Cycle
- **Week 3:** Environment Configuration

Phase 2: Skill Development (Weeks 4-7) → Project 2

- **Week 4:** Understanding Agent Skills (Both Tools!)
- **Week 5:** Creating Custom Skills
- **Week 6:** Subagents & Context Management
- **Week 7:** APIs & Automation (Gemini API + Claude API)

Phase 3: Production (Weeks 8-12) → Project 3

- **Week 8:** Multi-Agent Systems (ADK + Anthropic SDK)
- **Week 9:** Production Patterns & CI/CD
- **Week 10:** MCP Integrations (Both Tools!)
- **Week 11:** Security & Governance
- **Week 12:** Demo Day & Launch

Homework

Reading:

1. Karpathy's original tweet + thread
2. Simon Willison: "Not all AI-assisted programming is vibe coding"
3. Addy Osmani: "How to write a good spec for AI agents"

Assignment:

Write a PRD for your Project 1 idea.

Assignment:

Write a PRD for your Project 1 idea.
